Mousetrapper Advance

Mousetrapper Advance Relieves Typing Stress

The latest electronic version of this ergonomically designed 'Anti-RSI' keyboard and mouse aid.

Features & Benefits

Replacing the mouse and connecting to the PC USB port, the new roller-pad fingertip steering design moves the cursor around the screen with minimum hand and arm movement. Mouse commands can also be made from the roller-pad, additional buttons can be programmed for user-specified functions and built-in wrist rests provide extra comfort.

The Mousetrapper Advance improves the workstation layout at a sensible cost, equivalent to one or two days' absence for an operator.

Available from workstation ergonomics specialists, IT resellers or direct from this site. **Please pass this information to your company Health and Safety specialist.**

Price only £169.95
